

PaperLess

Developed by

Shareppy | FINTECH
internacional | Financial Technology

At Shareppy International we provide solutions for the financial sector.

We work to enable the corporate and banking sectors to meet the needs of their customers through tools such as PaperLess.

This is a tool that arises as a response to environmental responsibility in companies. It is a set of software components that helps to digitize processes by reducing paper consumption.

It provides legal certainty in the exact date and time of generation, sending and reception of the digital document.

It allows to digitally generate different formats to manage in the organization.

Digitize documents with real time stamping, to have control over them.

It optimizes the storage and search of information by sorting it and making it easy to locate through filters.

Reduces waste and the amount of copying and printing in the office, thus positively impacting the environment. Reduces waste and the amount of copying and printing in the office, thus positively impacting the environment.

Characteristics

PaperLess allows the digital signing of forms and documents generated by the entity. As well as, make changes, adjustments or corrections to formats and documents in real time to avoid printing errors.

Improves notifications by allowing notifications to be sent via e-mail or text messages. It can capture biometric elements.

This tool can be integrated with any document management system.

Benefits and results

01. Integrity, confidentiality and traceability of information. This ensures compliance with the three pillars of information security.

02. It guarantees the existence and integrity of digital documents over time, preventing them from being modified.

03. Avoid the use of paper as the fastest and most effective way to reduce the environmental impact of the organization.

04. It is a secure and cost-effective solution. It not only reduces stationery costs, but also reduces waste generated by the use of paper.
